EDUCATION

Khwaja Moinuddin Chisti Language University Aug 2023 — May 2027
Bachelor of Technology Computer Science & Engineering(AI&DS) Lucknow

- Cumulative GPA: 8.69
- Relevant Coursework: Big Data Analytics, Cloud Computing, Deep Learning, Data Structures, Statistical Analysis for Data Science, Data Visualization, DBMS

Jawahar Navodaya Vidyalaya Apr 2021 — Jul 2022
Class XII - 86.4% Barabanki, UP

Jawahar Navodaya Vidyalaya Apr 2019 — Jul 2020
Class X - 92.8% Barabanki, UP

WORK EXPERIENCE

Web Operations Coordinator Apr 2025 — Present
Khwaja Moinuddin Chisti Language University

- Built a static site generator that converted legacy HTML department pages into structured YAML/Excel data, automating content updates and eliminating manual HTML editing across the university website.
- Centralized faculty data into a Faculty Management System with standardized workflows, structured backups, and clear data lineage improving consistency and reducing dependency on external platforms.
- Trained junior coordinators on GitHub version control workflows and translated technical processes into clear documentation for non-technical stakeholders.

PROJECTS

Civic Issues Reporting API <https://github.com/ashraddhansh/civic-ops>

- Built a REST API data ingestion pipeline using FastAPI and PostgreSQL handling structured citizen issue intake, multipart media validation and storage to AWS S3, Twilio SMS OTP auth, JWT-based auth flows, and Alembic-managed schema migrations.
- Designed a configurable category-to-department routing system using a database mapping table, enabling admin-driven issue assignment and status tracking without code redeployment.
- Implemented end-to-end issue lifecycle tracking with custom IDs (CIV{timestamp}), soft audit trails, and role-based admin permissions supporting structured intake from unstructured citizen reports.

Cursor-Barebone <https://github.com/ashraddhansh/Cursor-Barebone>

- Built a Gemini AI-powered code agent with custom function tool definitions, mirroring real-world agentic workflows similar to Azure AI Foundry agent design.
- Designed 4 modular tool functions enabling an LLM to autonomously perform file I/O, directory traversal, and sandboxed code execution demonstrating practical understanding of structured function calling with AI models.
- Independently architected and shipped a multi-file Python AI agent end-to-end including config management, modular packaging, and a test suite with no predefined requirements or guided structure.

SKILLS

- **Programming Languages:** Python, C, Bash, JavaScript, HTML/CSS
- **Technologies:** GNU/Linux, Git/GitHub, FastAPI, REST APIs, JSON, Postman, SQL, Excel, Docker, Jinja, SSH, Typst, LaTeX, Neovim
- **Cloud:** AWS EC2, AWS Lambda, AWS S3, IAM & Policies, Microsoft Azure (familiar)
- **Data & Automation:** Pandas, Numpy, Scikit Learn, structured/unstructured data processing
- **AI & LLM Tools:** Gemini AI, Prompt Engineering, LLM Agent Frameworks, Claude Code, Cursor
